

## How to Enroll an iOS device into Microsoft Intune

The following article outlines the steps needed to enroll your iOS device into Microsoft Intune.

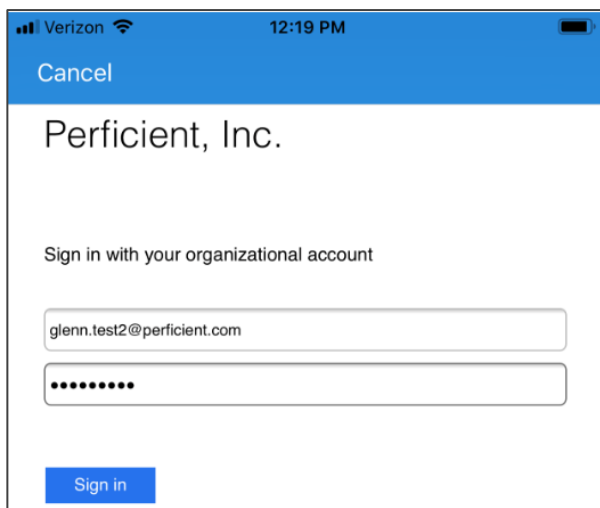

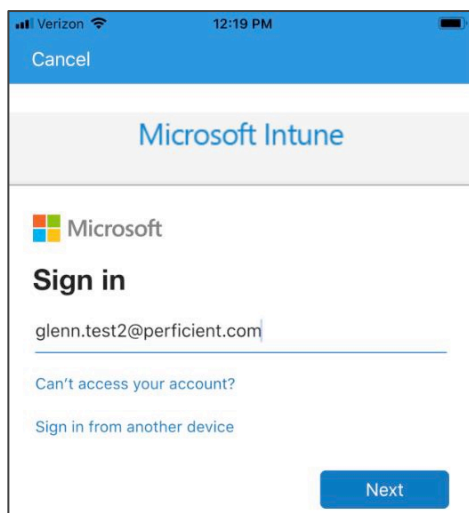

**PLEASE NOTE:** Your mobile device must meet the minimum requirements before you enroll.

- Apple iOS and iPadOS 11.0 and later

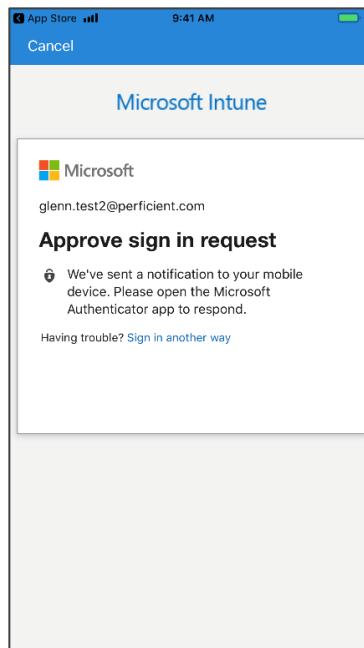

1. On your iOS device launch the App Store and search for “**Intune Company Portal**.” Download and install the Intune Company Portal app.

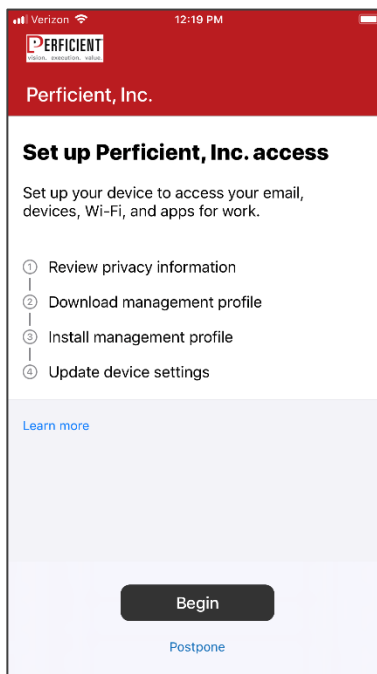

2. Once installed, launch the Intune Company Portal app.
3. You will be asked to provide your email address and password. Enter your credentials and **Next** then **Sign in**.

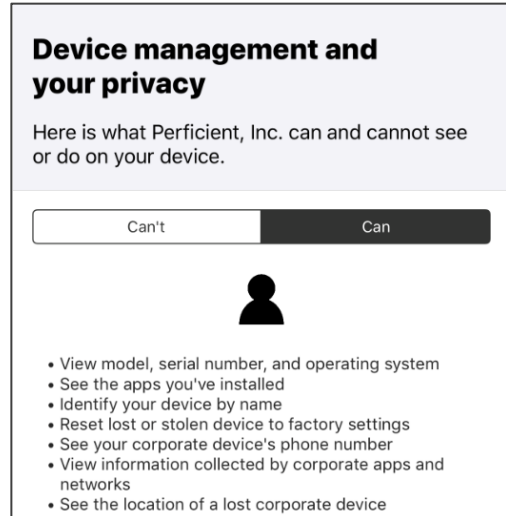

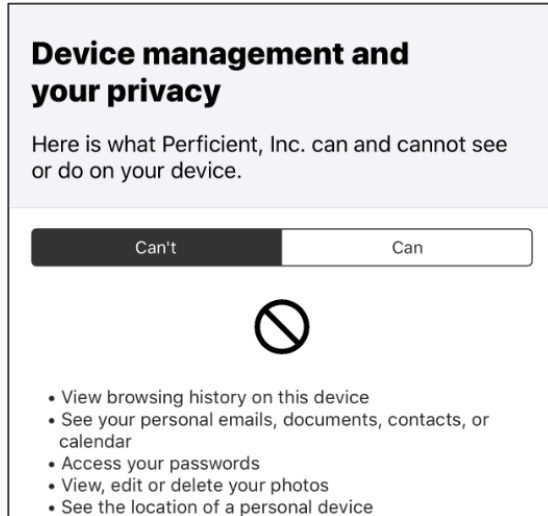

**NOTE:** If you are currently enrolled for Azure Multi-Factor Authentication (Azure MFA) you will also see the following message. You will need to approve the sign-in from the Microsoft Authenticator App.

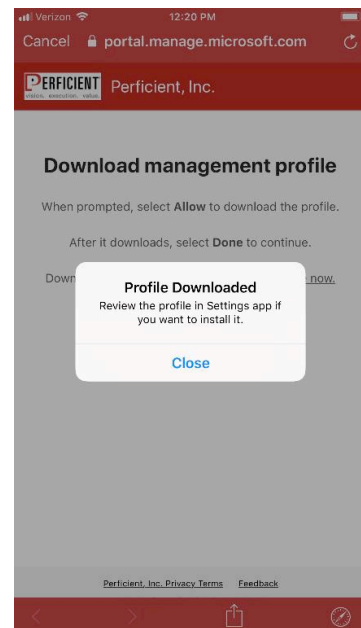

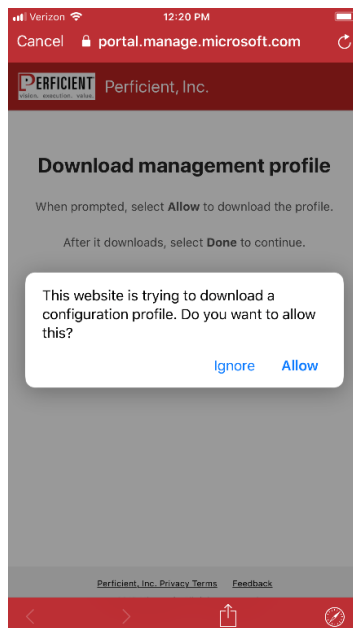

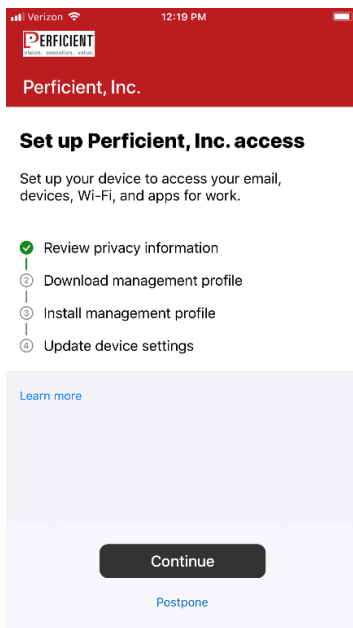

4. The first step is to **Review Privacy Information**. Click **Begin**.

Please be sure to review the Device management and your privacy sections. These pages outline what Perficient CAN and CANNOT see on your device.

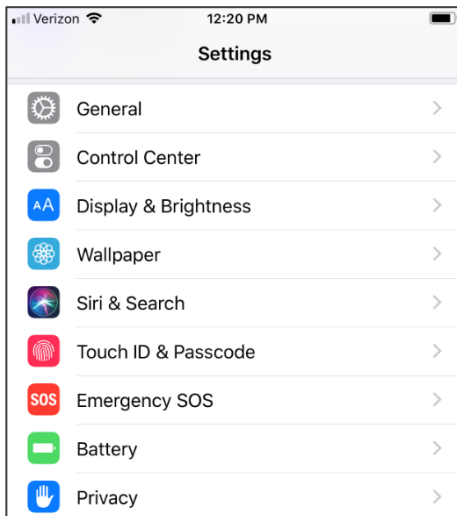

5. Next, you'll be asked to **Download the Management Profile** for your device. Click **Continue** and, when prompted, click **Allow**. You will receive a prompt stating the **Profile Download**. Click **Close**.

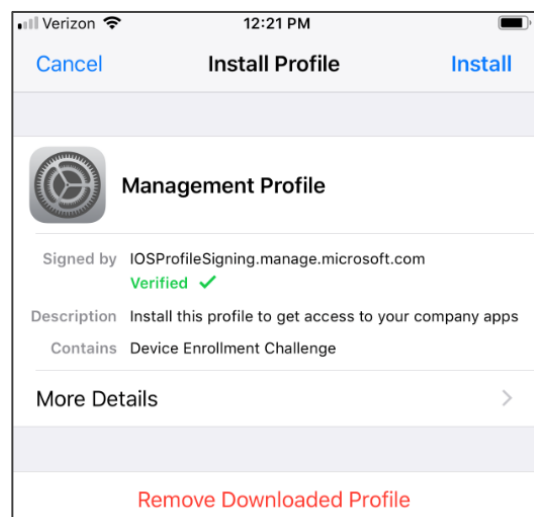

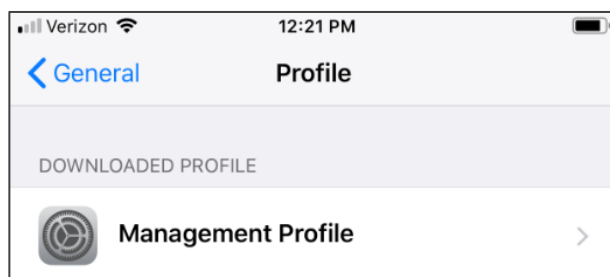

6. Next, you will install the management profile that you downloaded in the previous step.

7. Launch the **Settings** app and navigate to **General >> Profile**.

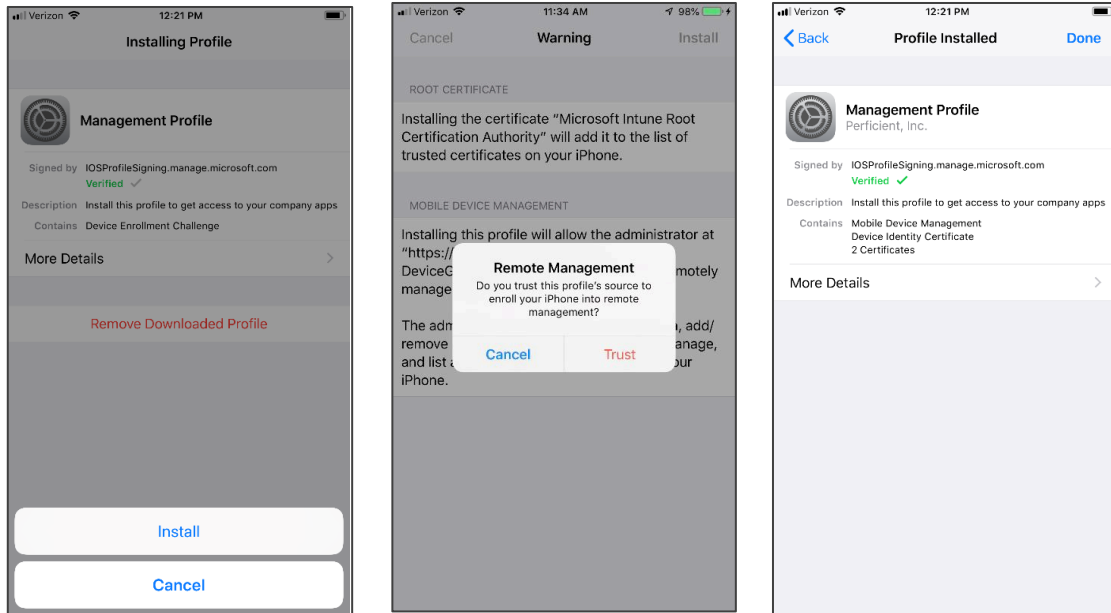

8. Under **Download Profile** click **Management Profile**.
9. Next, click **Install** in the **top-right corner of the screen**.

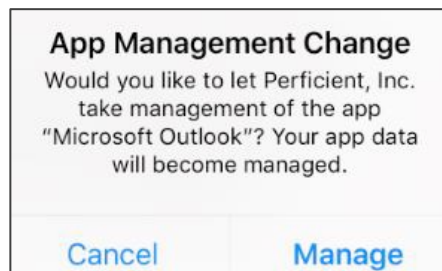

10. You will be prompted to enter your **passcode** to proceed. Enter your **passcode** then click **Install**.

11. Next, click **Install** on the **top-right corner of the screen** to install **Microsoft's Intune Root Certificate** and **Mobile Device Management Profile**. Click **Trust** to continue, then click **Done**.

12. The final step will begin the process of updating your device settings to allow Perficient to begin protecting its data. This process should only take a few minutes.
13. After a few minutes **Perficient's required apps will begin downloading and installing** on your iOS device. When prompted either select **Install** or, if you already have a required app installed on your iOS device, you must click **Manage**. Required apps include:
- Microsoft Outlook
  - Microsoft OneDrive for Business
  - Skype for Business
  - Microsoft Intune Managed Browser

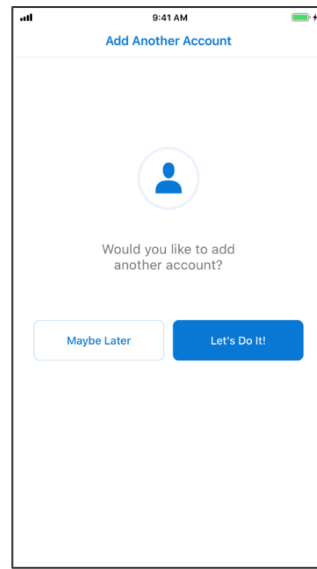

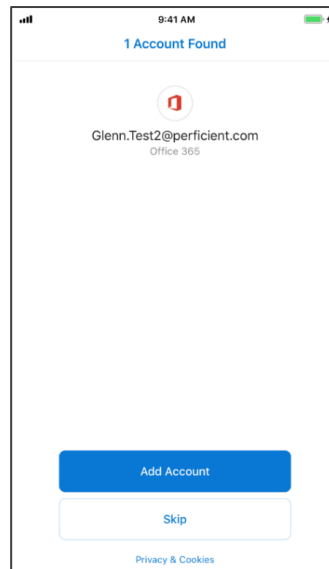

**NOTE:** If you currently **DO NOT** have the Microsoft Outlook or OneDrive for Business App installed on your iOS device proceed to the next section. If you **DO** have these apps installed, you will be prompted to restart the app.

## Setup Microsoft Outlook App on iOS Device

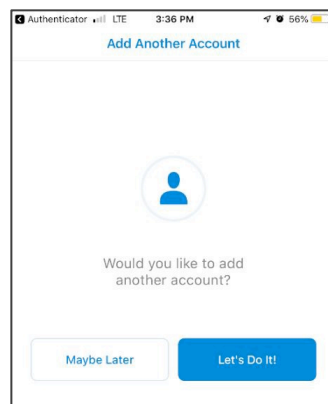

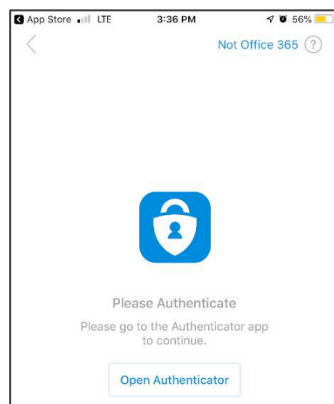

The following section will walk you through setting up your Perficient mailbox on the Microsoft Outlook App for iOS.

1. Launch the **Outlook** app and if you see your account on the main screen click **Add Account**. On the other hand, if you **DO NOT** see your account in the list click **Skip** then enter in your credentials to authenticate. Lastly, you will be asked to add another account select **Maybe Later**.

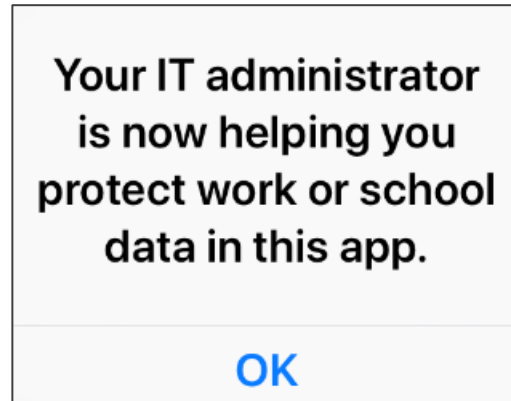

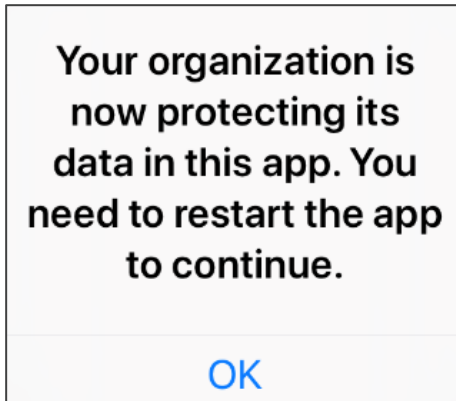

**NOTE:** If you are currently enrolled for Azure Multi-Factor Authentication (Azure MFA), you will follow these steps after selecting Add Account. You will need to approve the sign-in from the Microsoft Authenticator App.

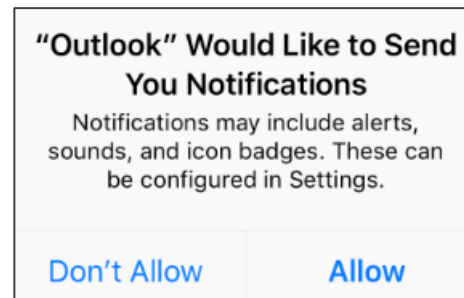

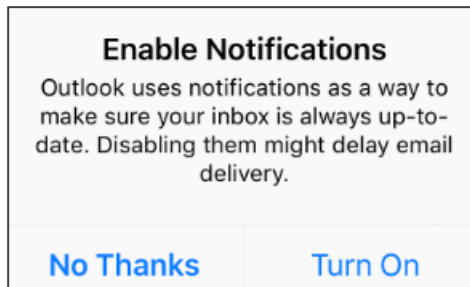

2. You will be prompted to authenticate via the Authenticator app. Click **Open Authenticator**, then tap **Maybe Later** on the next screen that asks to add another account.

3. You will get these notifications, click **OK** on each one, and the Outlook app will close.

4. Re-open the **Outlook app**. You will be asked to enable notifications, click **Turn On** then select **Allow** on the next screen to allow **Outlook** to send you notifications.

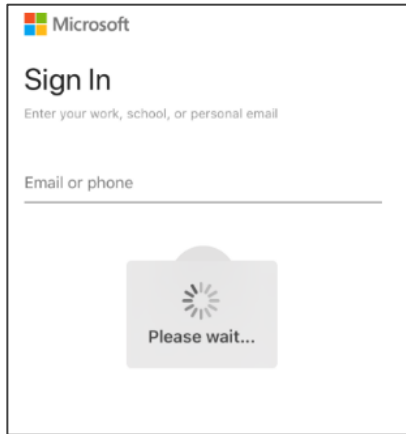

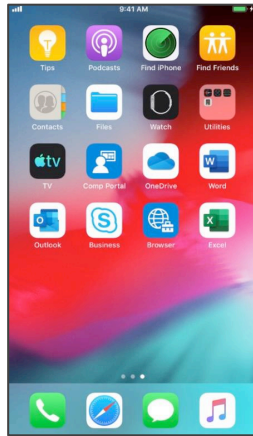

5. Your Perficient mailbox setup in Outlook is now complete. Proceed to the next section to setup **OneDrive for Business**.

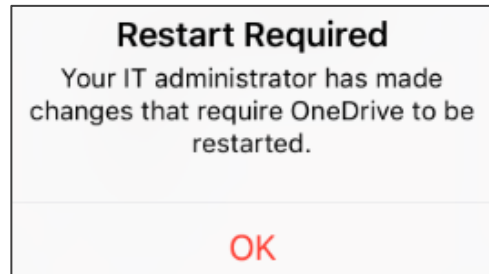

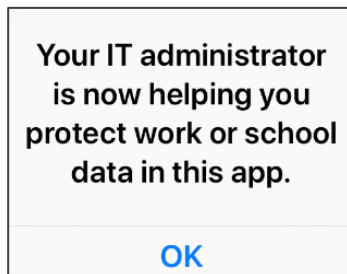

## Setup Microsoft OneDrive for Business on iOS Device

The following section will walk you through setting up OneDrive for Business for iOS.

1. Open the OneDrive app from your home screen. It will sign you in using your Perficient account.

2. You will get these notifications, click OK on each one, and the OneDrive app will close.

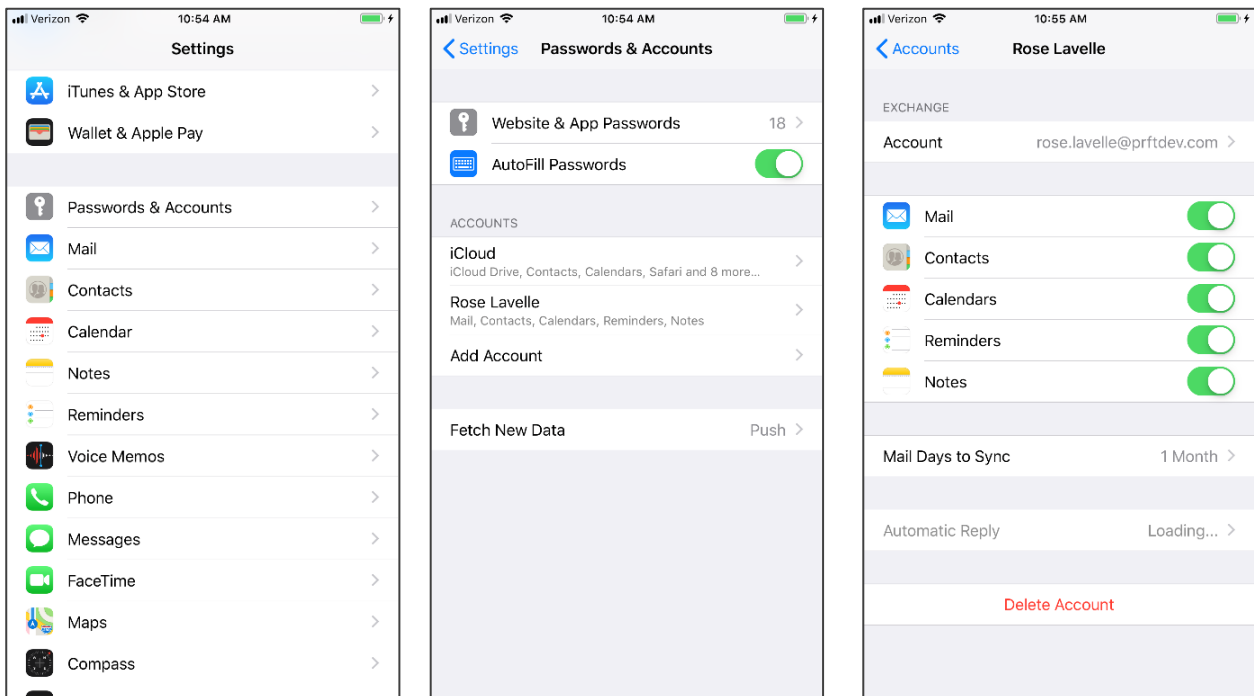

3. Once you relaunch the OneDrive app your setup will be complete.

## Remove mailbox for the iOS native mail client

The following section walks you through removing your existing Perficient mailbox for your iOS native email client.

1. Launch the “Settings” app on your iOS device.
2. Next, under “Accounts” select your Perficient mailbox profile.
3. Finally, click “Delete Account” at the bottom of the screen.

### Please note the following limitations

- All web links will be opened in the Intune Managed Browser App
- You will not be able to save Perficient data to your local device.
- Cut/Copy/Paste will only work between your managed apps in your work profile
